The present sequence represents a NF-kappa inducing kinase (NIK). The full length DNA sequence was obtained by PCR using clone 10 (AAV03124). What was found to induce NF-kappaB even more effectively than TRAF2. Proteins capable of binding to TRAF2 and NIK were identified. The NIK or TRAF-2 binding proteins can be used for modulation or mediation in cells of NF-kappaB activity or any other intracellular signalling activity modulated or mediated by TRAF2. TRAF-binding proteins are especially used for prevention or treatment of pathological conditions associated with NF-kappaB induction, e.g. acute hepatitis, autoimmune-induced cell death,

ö
e.g. death of the beta Langerhans cells or the pancreas that results in diabetes, the death of cells in graft rejection, the death of colls of graft rejection, the death of colls death of cells in multiple sclerosis, and AIDS-inhibited T cell suicide which causes proliferation of the AIDS virus and hence the AIDS disease. The proteins are also useful for screening of ligands capable of binding to a protein, which are useful for modulating cellular activity modulated/mediated by TRARS
                                                                                                                                                                                                                                                                                                                 180

The present invention relates to a new method for identifying compounds for treating and/or preventing cytomegalovirus (CMV) infection and/or related diseases. The method of the invention comprises contacting a test compound with at least one of the callular kinases RICK, RIP, Nck-Interacting kinase, MKK3 and SRPK-2 and detecting any change in kinase activity. The method of the invention can be used to treat and/or prevent CMV infections and related diseases. Oligonucleotides that can detect the specified kinases can also be used for diagnosis of infection. The present amino acid sequence represents the human callular kinase NIK (Nck-Interacting kinase) protein of the invention, as described above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9
                                                                                                                                                                                                                                                                                 The present invention relates to a method for identifying a ligand (L), which binds to an inactive conformation of target protein kinase (T). The method involves contacting inactive conformation of (T), which contains or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bonding to the reactive group thus forming a kinase-(L) conjugate (C). The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                             kinase (T) comprises contacting the conformation of target protein contains reactive group at binding site, with ligands and detecting kinase-ligand conjugate formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        VITKGTAKEGSEAGPAAISIIAQAECENSQEFSPTFSERIFIAGSKQYSQSESLDQIPNN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This invention relates to novel protein complexes of the tumour necrosis factor-alpha (TNR-alpha) signalling pathway. Specifically, it refers to methods for preparing these complexes comprising at least two component proteins, as well as screening methods to identify modulators of the pathway, which include antibodies, agonists and antagonists thereof. The present invention describes a protein complex and kit that are useful for diagnosing, prognosing or treating chronic inflammatory diseases such as rheumatoid arthritis and inflammatory bowel disease, infectious diseases such as such as septic shock and bacterial infections; neurological diseases such
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New protein complex comprising at least one first and second protein of the Tumor Necrosis Factor-alpha(TMR-alpha) signaling pathway, useful for diagnosing or treating inflammation, neurological diseases, infectious diseases or cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein complex; tumour necrosis factor-alpha signalling pathway; INF-alpha; chronic inflammatory disease; rheumatoid arthritis, inflammatory bowel disease; inflammatory bowel disease; septic shock; bacterial infection; neurological disease; stroke-induced inflammation; neurodegenerative disease; cancer; antiinflammatory; antiarthritic; antirheumatic; cytostatic; antibacterial; gene therapy; human.

cancer. Accordingly, these complexes can be used for the development of pharmaceutical compositions that exhibit antiinflammatory, antiarthritic, antirthematic, cytoscatic and antibacterial activities and can be used for gene therapy purposes. In particular, the invention further provides siRNA-oligonucleotides useful for inhibiting protein expression for in vitro or cell culture assays. This polypeptide is a human protein that specification to form novel complexes of the TNF-alpha signalling pathway of the invention.

The present sequence represents human wild-type NIK, a NF-kB inducing kinase having serine/threenine kinase activity. The invention relates to: (a) an N-terminus deletion mutant NIK protein (see AAY31666), and (b) a kinase deficient NIK mutant protein (see AAY31667 and AAY31668) that inhibits auto-phosphorylation or transphosphorylation. The invention provides the molecular basis for cytokine induction of N-kB-dependent immune and inflammatory responses, emphasising a role for both NIK-NIK and NIK-IKK (IkB-specific kinase) interactions. A novel and highly specific method for modulating NF-kB-dependent immune, inflammatory and anti-apoptotic responses is based on interruption of the critical protein interaction of NIK and IKK. The mutant NIK proteins are used in claimed methods for inhibiting NF-kB-dependent gene expression. The kinase-deficient NIK mutant proteins hinbit activation of IKK. The N-terminal deletion NIK mutant proteins bind to IKK, thus inhibiting NIK/IKK

                                                                                                                                                                                                                        Screening agents for modulating interaction of nuclear factor kappas inducing kinase - with kinase-binding target, useful for controlling levels of the kinase, for treatment and diagnosis of conditions associated with e.g. inhibition of signal transduction by tumour necrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120
                                                                                                                                                                                                                                                                                                                   This sequence represents a novel human nuclear factor-kappaB (NFkB)-
inducing kinase (NIK) which is used in a method for screening for agents
that modulate the interaction of NIK with a NIK-binding target. This
protein can be used as a modulator of cellular functions at the NIK
level, or for development of such compounds. NFkB is involved in
expression of many immune and inflammatory responses and of some
important viral genes. The protein may be used diagnostically and
therappeutically, in conditions associated with abnormal utilisation of
pathways that involve NFkB, e.g. inhibition of signal transduction by
tumour necrosis factor (TNF)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

947 947 Probe, vector or recombinant nucleic acid encoding a polypeptide, especially human nuclear factor kappa-B-inducing kinase protein - useful for producing recombinant protein.

```
This represents a nuclear factor kappa B (NF-kB)-inducing kinase (NIK) polypeptide or its fragment has one or more activities selected from kinase activity and inhibitory activity; IkB kinase-alpha and beta binding activity and inhibitory activity; IkB kinase-alpha and beta binding activity and binding inhibitory activity; activity; IkB binding activity and binding inhibitory activity, NF-kB activating and inhibitory activity and binding inhibitory activity and binding inhibitory activity. NF-kB activating and inhibitory activity and cortor containing the NK nucleic acid can be used to transform host cells for the recombinant production of the protein. The NIK nucleic acid and the polypeptide may be used in diagnosis (e.g. genetic hybridisation screen for NIK transcripts), therapy (e.g. NIK kinase inhibitors to inhibit TNF signal transduction), and in the biopharmaceutical industry

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This represents a nuclear factor kappa B (NF-kB)-inducing kinase (NIK) polypeptide. The NIK polypeptide or its fragment has one or more activity and inhibitory activity; IkB kinase-alpha and beta binding activity and binding inhibitory activity; tumour necrosis factor (TNF) receptor-associated factor 2 binding activity and binding inhibitory activity; IkB binding inhibitory activity, IkB binding activity and binding inhibitory activity, NF-kB binding activity and binding inhibitory activity, NF-kB binding activity and pending activity of activity. The NIK nucleic acid and the polypeptide may be used in disgnosis (e.g. genetic hybridisation screen for NIK transcripts), therapy (e.g. NIK kinase inhibitors to inhibit TNF signal transduction), and in the biopharmaceutical industry (e.g. as immunogens, reagents for isolating other transcription regulators, and reagents for screening chemical

The present sequence represents a kinase-deficient mutant of human NF-kB conducing kinase (NIK), in which the threonine residue at position 559 of the midic-type protein (see AAY11655) is replaced by alanine. The invention relates to: (a) an N-terminus deletion mutant NIK protein (see AAY1666); and (b) a kinase deficient NIK mutant protein, especially the present sequence of the sequence given in AAY31688, that inhibits autopresent sequence of the sequence given in AAY31688, that inhibits autopresent sequence of the sequence given in AAY31688, that inhibits autocompletely and an information of NF-kB-dependent immune and information of NF-kB-dependent immune and information of the specific kinase) interactions. A novel and highly specific method conformation of the critical protein interaction of the critical protein interaction of the critical protein interaction of inhibiting NF-kB-dependent immune, inflammatory and anti-apoptotic confinibiting NF-kB-dependent immune, inflammatory and anti-apoptotic confinibiting NF-kB-dependent gene expression. The kinase-deficient NIK mutant proteins inhibit the activation and phosphorylation of endogenous confined from the wild-type NIK sequence given in figure 10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           720
                                                                                        are associated with carcinomas. The sequences are useful for: (i) for screening drug candidates; (ii) for screening of bioactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (iv) for treating carcinoma; (vii) for inhibiting the activity of CAP; (ix) as a biochip; (x) for diagnosing carcinoma; (vii) for neutralizing the effect of CAP; (ix) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CAP. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360

                                                                                                                                    900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a kinase-deficient mutant of human NF-kB inducing kinase (NIK), in which the serine residue at position 549 of the wild-type protein (see AAY11665) is replaced by alanine, the threonine residue at position 552 is replaced by alanine, and the threonine residue at position 559 is replaced by alanine. The invention relates to: (a) an N-terminus deletion mutant NIK protein (see AAY11666); and (b) a kinase deficient NIK mutant protein, especially the present sequence of the sequence given in AAY11667, that inhibits auto-phosphorylation or transphosphorylation. The invention provides the molecular basis for cytokine induction of NF-kB-dependent immune and inflammatory responses,

interactions. A novel and highly specific method for modulating NF-kB-dependent immune, inflammatory and anti-apoptoric responses is based on interruption of the critical protein interaction of NK and IKK. The mutant NIK proteins are used in claimed methods for inhibiting NF-kB-dependent gene expression. The kinase-deficient NIK mutant proteins inhibit the activation and phosphorylation of endogenous IKK. Note: The present sequence is not shown in the specification but is derived from the wild-type NIK sequence given in figure 10

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        쉽
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  à
```

```
New nucleic acid molecule for diagnosing, preventing or treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 VAHATEGKMARVCWKGKRRSKARKKRKKSSKSLAHAGVALAKPLPRTPEQESCTIPVQ- 179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          KLHHPQDGGPLPLPTHPFPYSRLPHPFPFHPLQPWKPHPLESFLGKLACVDSQKPLPDPH 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VAHATEGRMARVCWKGKRRSKARKKRKKKSSKSLAHAGVALAKPLPRTPEQESCTIPVQE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an isolated nucleic acid molecule encoding a polypeptide which is believed to be cytostatic, antinflammatory, immunosuppressive, antibacterial and virucidal. The composition and methods are useful for diagnosing, preventing and treating diseases such as proliferative (e.g. cancer), inflammatory, immune, metabolic, genetic, bacterial and viral diseases. The present sequence represents a human secreted protein. The present sequence is available on WIPOWEB and is not in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MAVMEMACPGAPGSAVGQQKELPKAKEKTPPLGKKQSSVYKLEAVEKSPVFCGKWEILND
